

Electricity can be dangerous! It can give you an electric shock which can badly hurt or even kill you.
Be a bright spark and get switched on to a few simple rules.

Keep kites and other objects away from power lines

Never climb pylons

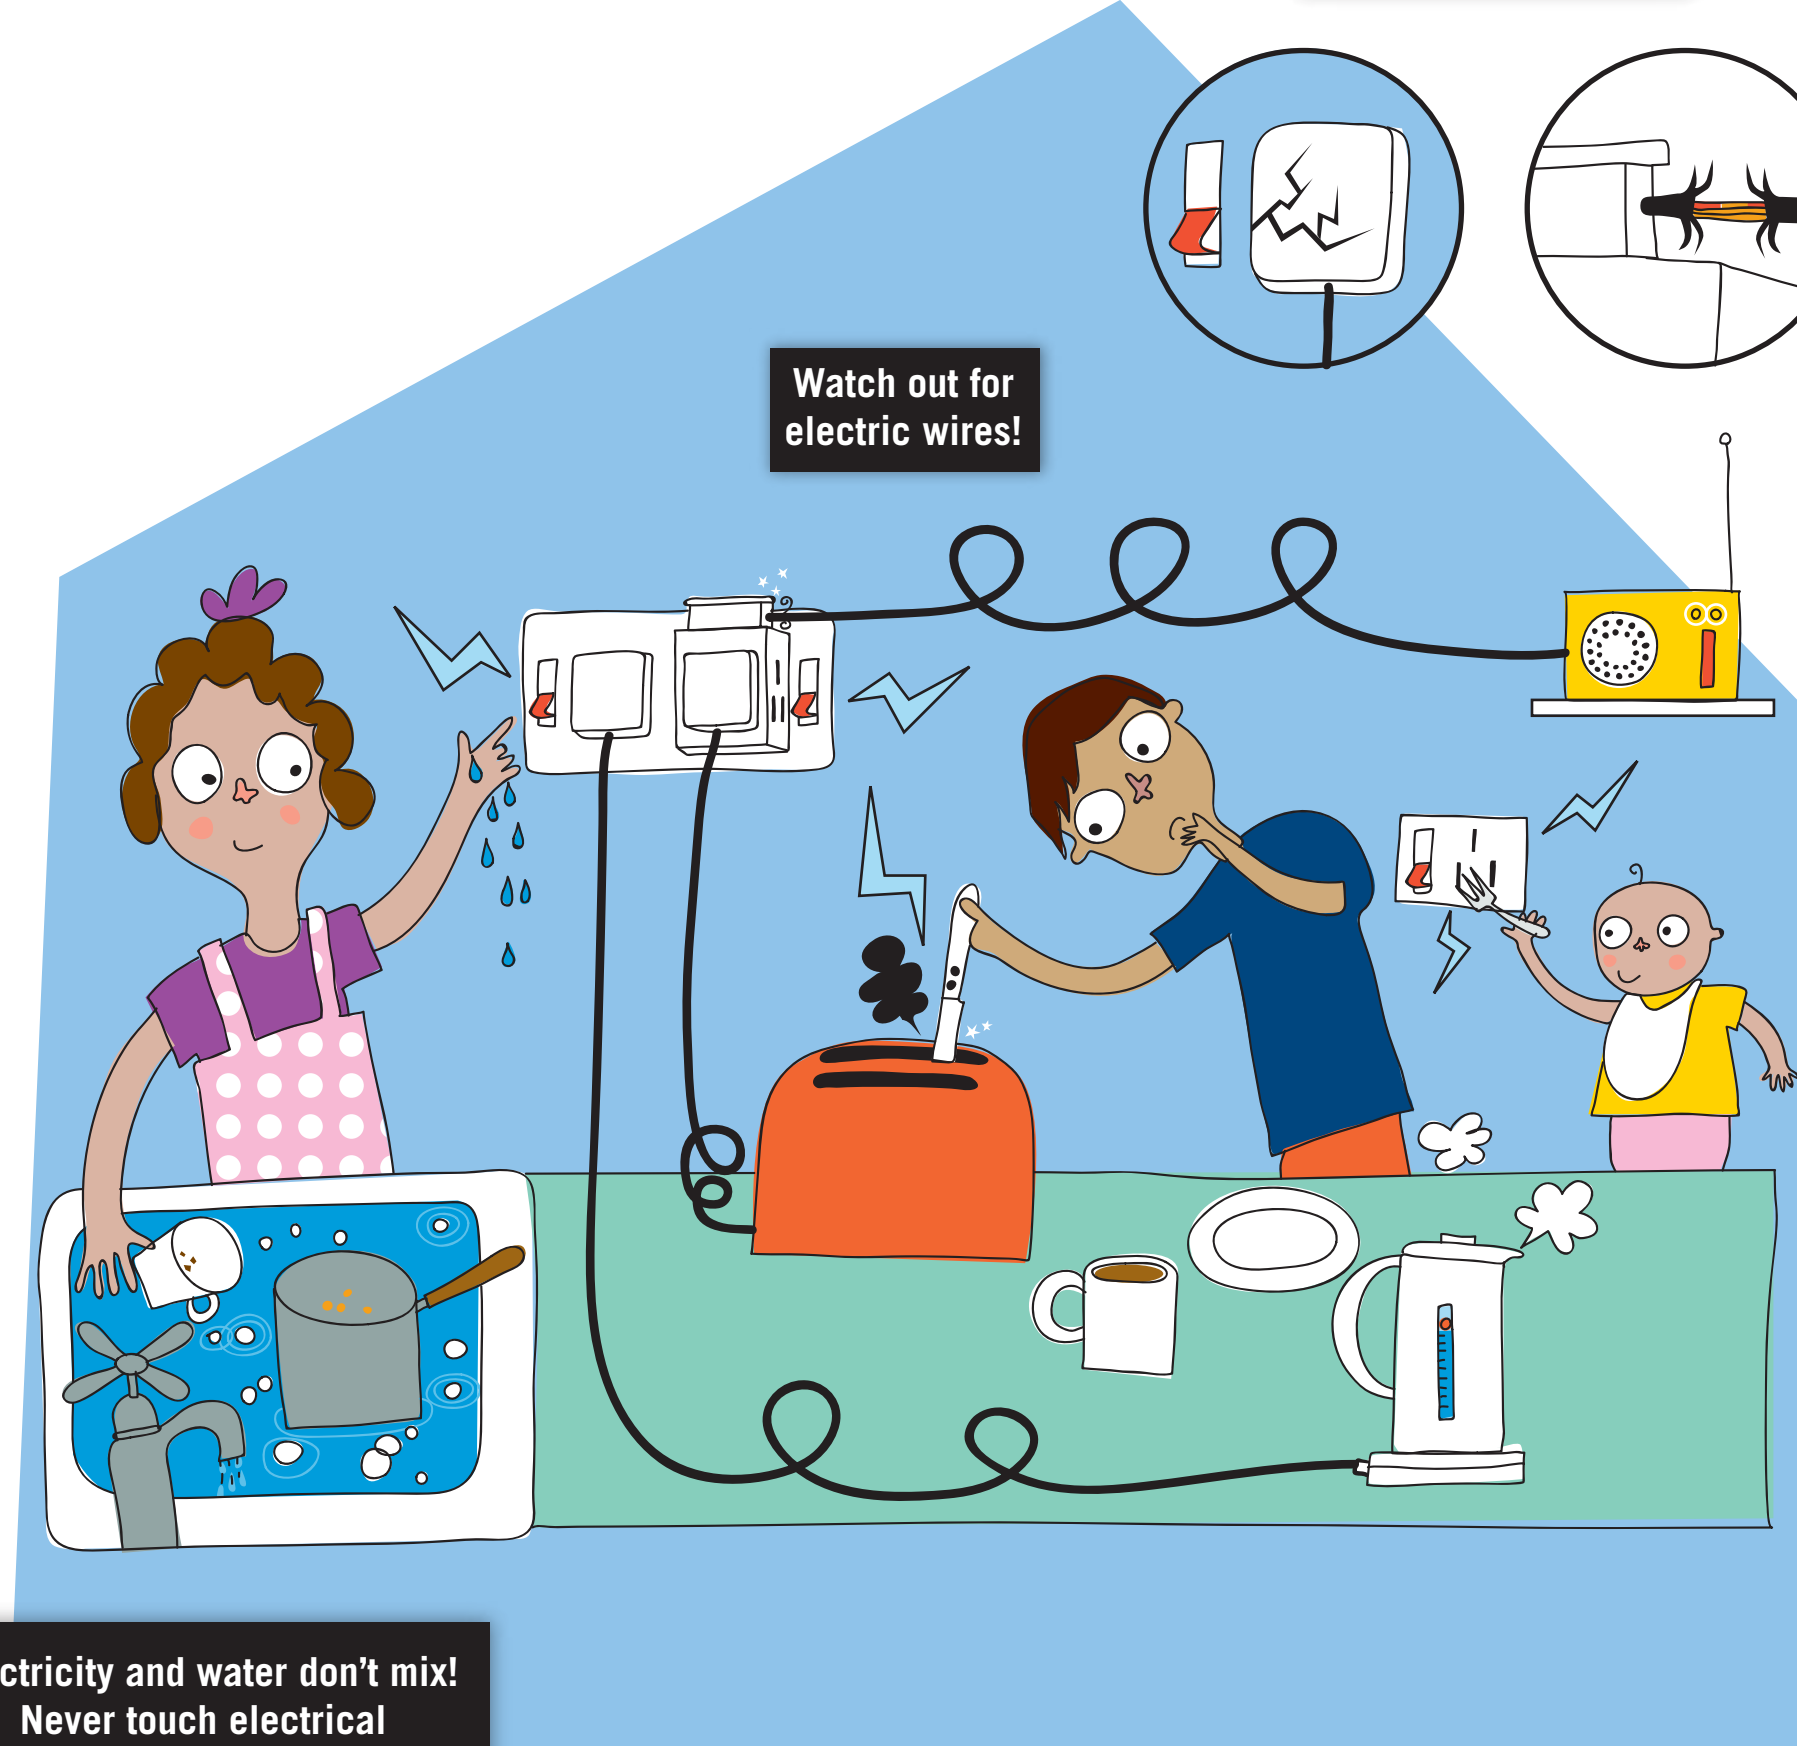

Never trespass on the railway track

Electricity can jump through the air...

Never use appliances with a damaged plug or frayed cord

Never overload sockets with too many plugs

Watch out for electric wires!

Electricity and water don't mix!
Never touch electrical appliances with wet hands

Never poke anything in electrical sockets or appliances

...and travel through water!
