--	---

2. LOGGING OFF

<ul style="list-style-type: none"> To end a session <ul style="list-style-type: none"> with a temporary saved search of two hours default: current search session and any MEM or MEMS lists) without a temporary saved search 	<p>ST</p> <p>ST EN</p>
---	--------------------------------------

3. SUBACCOUNT

<ul style="list-style-type: none"> To charge back your online search costs to a particular client, department or project number, the online cost estimator and the monthly invoice will be itemized per subaccount To start a subaccount Give a name up to 30 alphanumeric characters. (No spaces or tabs are allowed in the subaccount name.) To display the subaccount currently being charged To list all subaccounts that have been charged during the current search session To revert charging to the main billing account 	<p>SUBACCT MARKET</p> <p>SUBACCT</p> <p>HIS SUBACCT</p> <p>SUBACCT END</p>
--	--

4. SELECTING A DATABASE

<ul style="list-style-type: none"> ▪ To display the list of currently available databases 	FI or FILE
<ul style="list-style-type: none"> ▪ To obtain a list of databases beginning with "Z" (training files) 	FI Z+
<ul style="list-style-type: none"> ▪ To obtain statistics of a database 	FI PLUSPAT STAT
<ul style="list-style-type: none"> ▪ To select a database (or change databases) 	FI PLUSPAT or FILE PLUSPAT
<ul style="list-style-type: none"> ▪ Changing databases: <ul style="list-style-type: none"> - with a temporary saved search (default) - and re-executing the search strategy from a previously-selected database. Use a ";" to stack several commands together on one line, and the "FROM" parameter followed by the name of the previous database - and erasing the search strategy in the current database (the MEM and MEMS lists remain intact) - and erasing all the previous search strategies 	FI DWPI or FILE DWPI FI DWPI;EX FROM PLUSPAT
<ul style="list-style-type: none"> ▪ To select the Questel Orbit "Parking file" with a temporary saved search 	ERSLL
<ul style="list-style-type: none"> ▪ To select the Questel Orbit "Parking file" with a temporary saved search 	ER FROM BEGIN FI QUESTEL
<ul style="list-style-type: none"> ▪ To select a database CLuster (system or user-defined database clusters for "one search" or multi-file search) 	FI CL PATENTS [or] FI PATENTS (use of "CL" is optional)
<ul style="list-style-type: none"> ▪ For more on CLuster searching, click on link at right - or turn to page 15 	<u>CLuster Searching</u>
<p><u>Notes:</u></p> <ul style="list-style-type: none"> ▪ The same commands and operators used for searching a single database are used when searching in a cluster environment. Use the FROM parameter to limit a command to a single database. This parameter must be used with some specific commands. ▪ The display of detailed search results (database by database) may be switched on or off in POP settings using the DETail ON or DETail OFF commands. The default is to display the detailed search results (DET ON). ▪ When connecting to a cluster, all previously-created search strategies are erased. 	

5. LIMITING A SEARCH

5.1 Limiting to a specific update or range of updates

Note : The UP command uses the date the update is added to the database, and does not correspond exactly to the producer update.

<ul style="list-style-type: none"> ▪ List updates in a particular database for selection: 	FI PLUSPAT UP 1 33354 2003/05/08 2 51743 2003/04/30 3 19746 2003/04/25 4 54726 2003/04/16 5 27492 2003/04/09 6 52537 2003/04/03....
--	--

<ul style="list-style-type: none"> - select the most recent update - select update number 3 - select updates 3 – 6 	1 3 3-6
<ul style="list-style-type: none"> ▪ Limiting a search to specific update periods: <ul style="list-style-type: none"> - to most recent updates - to update period number 5 - to updates 5 to 7 	UP 1 UP 5 UP 5-7
<ul style="list-style-type: none"> ▪ Limiting by updates a search to a specific range of years: <ul style="list-style-type: none"> - to a single year - to a range of years 	UP 2002 UP 2001-2002
<ul style="list-style-type: none"> ▪ List updates from a specific database in a previously-selected database or specific database in a cluster environment 	UP FROM EPPATENT UP 1-10 FROM DWPI
<ul style="list-style-type: none"> ▪ To return to the complete database 	UP ALL

5.2 Limiting to a sub-set of the database

<ul style="list-style-type: none"> • To create a database sub-set, use the LIMit command followed by a search statement number. All subsequent searches will be automatically carried out on this sub-set. <ul style="list-style-type: none"> - sub-set created from a previous search statement - sub-set created from a search term - sub-set created from a range of search terms - sub-set created using Boolean operators 	LIM LIM 3 LIM 2002-37/UP LIM /UP 2002-01 : 2002-37 LIM HOECHST/PA AND JP/PN
<ul style="list-style-type: none"> ▪ To return to the complete database 	LIM ALL

Note: 1. The LIM command cannot be used in current awareness searches (SDI).
2. Limiting to a zero result search statement is ignored.

6. SEARCHING

Note: The Questel.Orbit system is by default in SEARCH MODE. Enter search terms directly, i.e. without preceding "s " or "ss".

Correct Entry of Terms wireless application protocol l or WAP	Incorrect Entry of Terms s wireless application protocol s sl or WAP
--	---

6.1 Search Terms

There are several different types of search terms used for searching the Questel.Orbit databases.

- **Single word terms** ("free text"). Any character string containing letters from A to Z and/or numbers from 0 to 9, separated by any form of punctuation (space, hyphen, etc) e.g. Index term : **X-RAY**
Except RESERVED TERMS
- **Multi-word phrases** ("phrase indexed"). Any phrase where the component terms are designed to belong together : e.g. Inventor name : **SMITH A P**
See NBR command
- **Dates**. Any date field specifically designed for rangeable date searching. e.g: Patent Publication date : PD=2000-01-30 (in the format YYYY-MM-DD)
See Date Searching
- **Numeric terms**. Any string of numbers searched as meaningful element in a specific field; e.g.: US Patent Classification 70505/PCL -
See Patent Class Searching

6.2 Implied Adjacency

<ul style="list-style-type: none"> Implied adjacency is available in certain indexes in selected databases. It enables searching without using the W proximity operator. Right-hand and internal truncation can be used with implied adjacency. Left-hand truncation is not available with implied adjacency. <p>Note: If middle or internal word(s) are 3 characters or less, they will be ignored, e.g.: if you have entered : it will be searched as</p> <ul style="list-style-type: none"> To retrieve 3 char middle word, use: W 	<p>AIR BAG</p> <p>FIELD EFFECT TRANSISTOR</p> <p>DESUL??URIS+ CATALYST</p> <p>NON FAT FOOD NON 1W FOOD NON W FAT W FOOD</p>
--	---

6.3 Truncation

<ul style="list-style-type: none"> Unlimited truncation Limit of 30,000 terms per answer set Limited truncation: <ul style="list-style-type: none"> up to one character (0 or 1 char) up to two characters (0, 1 or 2 chars) exactly one character 	<p>ROBOT+</p> <p>COTTON? ANALYS?? /IC H01#</p>
<ul style="list-style-type: none"> Right-hand truncation 	<p>AMPLIF+ LASER?</p>
<ul style="list-style-type: none"> Internal truncation (from second character only) 	<p>ALUMIN?UM /IN O?HARA M+</p>
<ul style="list-style-type: none"> Left-hand truncation 	<p>+INFLAMMATORY</p>
<ul style="list-style-type: none"> Using a combination of truncation methods (#, ?,+). Each type may be used up to 3 times within a search term. The limit is 7 term portions and identical truncation symbols. 	<p>+CIL??N+</p>
<ul style="list-style-type: none"> Truncation on single word terms or phrases 	<p>SURF+ /IT X?RAY+</p>
<ul style="list-style-type: none"> Display options: <ul style="list-style-type: none"> To request the display of variations (see 15.4 for POP and OP options) 	<p>+CONDUCT+/S +CONDUCT+/ALL</p>

6.4 Searching with field qualifiers

<ul style="list-style-type: none"> To obtain a list of field qualifiers valid for the current database Common Field qualifiers for Patent databases 	<p>FLD</p> <p>TI PA IN AP PR AB IC PCL CT CLM MCLM DESC BSUM</p>
<ul style="list-style-type: none"> Searches the Basic Index (default) Post qualify: searches for the qualified term in the specified index or field Pre-qualify: searches the whole search statement in the specified index 	<p>ENZYME? LASER/MCLM</p> <p>/PA CIBA AND GEIGY</p>

<ul style="list-style-type: none"> ▪ Several different qualifiers may be used simultaneously: <ul style="list-style-type: none"> - To search several indexes or fields - To display generated terms - To suppress generated terms 	SMITH+/PA/IN SMITH+/IN/S or SMITH+/S/IN SMITH+/IN/ALL or /ALL/IN SMITH+
--	--

6.5 Date and numeric field qualifiers

<ul style="list-style-type: none"> ▪ In a single date field, search for year-month-day: <ul style="list-style-type: none"> - A specific year or date - Ranging in selected databases: - Before a specific year - Including and after a specific year - A range of dates (selected databases) <p>Use numeric operators: <, >, <=, >=, =.</p>	PD=2002 APD= 1984-02-10 PD<1982 PRD>=1990 PD=1981-01-01:1988-01-31
<ul style="list-style-type: none"> ▪ Multiple date field , (as in DWPI family PN listing), use Link (L) operator to specify a date with a specific patent authority/country. 	/PN US L 2002 /PN 2000 L (JPB2 or USB2 or EPB?)
<ul style="list-style-type: none"> ▪ Single numeric field (not available in all files) <ul style="list-style-type: none"> - 1 family member only - Number of claims - Number of DWGS 	NP=1 NCL>=5 NDG<3
<ul style="list-style-type: none"> ▪ Presence of a field <ul style="list-style-type: none"> - Record with cited patents - Record updated with Abstract 	CT=YES UAB=YES

6.6 Combining Terms (AND, OR, NOT, W, D,...) Use of Parentheses

<ul style="list-style-type: none"> ▪ Logical operators: <ul style="list-style-type: none"> - Records retrieved containing both terms (AND) - Records containing at least one of the terms (OR) - Records containing the first term but not the second (NOT) - Single use of any Boolean or proximity operator with many search terms or search statements - End a long line of entry with a space and hyphen "-" to continue entering more terms in same search statement - Combining search result sets using search statement numbers 	PLUTONIUM AND ISOTOPE AIR OR TEMPERATURE COLA/MARK NOT CL32 OR CAT,DOG,MOUSE,RABBIT OR CAT,DOG,MOUSE,RABBIT- HAMSTER,GERBIL 5 OR 6 1 OR 2 OR 3 1 :3 OR 1,2,3
<p>Proximity operators (separated by spaces or parentheses):</p> <ul style="list-style-type: none"> - W or (W): adjacent terms in order specified - nW or (nW): adjacent terms in order specified, separated by up to n words, where n is from 1 to 9. - =nW or (=nW): exactly n words between search terms - D or (D): adjacent terms in any order - nD or (nD) adjacent terms in any order, separated by up to n words - =nD or (=nD): exactly n words between search terms 	NEW W YORK or NEW (W) YORK FILTER 3W FLOW METAL W METAL 3W BOND /AB LIGHT (=2W) DIODE TOWN? D PLANNING HEAT+ (3D) ELECTRIC?? COMPOSITE? (=1D) (FIBRE? OR FIBER?)

<ul style="list-style-type: none"> ▪ Presence of both terms in the same portion of a record. Terms appear in the same: <ul style="list-style-type: none"> - Sentence: S or (S) - Paragraph: P or (P) - Link: L or (L) - Field: F or (F) 	<p>/AB LIQUID S CRYSTAL /PA CIBA P GEIGY /PN JP L 1997 SODIUM F SALT</p>
<ul style="list-style-type: none"> ▪ Presence of the first term in the absence of the second term (negation): <ul style="list-style-type: none"> - Paragraph: NOTP - Linked: NOTL - Sentence: NOTS - Field: NOTF 	<p>/M3 (G100 LK431 LM240) NOTL (H ? OR J ?)</p>
<ul style="list-style-type: none"> • Combining several operators <ul style="list-style-type: none"> - Use parentheses (NESTING) when combining different operators - Up to 5 levels of nesting may be used - Qualifiers may be applied to parentheses - Search terms and search statement numbers may be combined 	<p>(COMPUTER ? OR CALCULATOR) AND (IBM/PA OR IBMC/CC) WINDSURF+ OR (WIND W (SURF OR SURFING)) LASER AND (FR OR GB)/DS</p> <p>2 AND (P/DT AND CATALYST)</p>

6.7 Searching character strings (STRS)

<ul style="list-style-type: none"> • Default: searches for the specified character string in the Basic Index for all the records in the last search statement with results (max 5000 records) ▪ Search in a specific field ▪ Truncation may be included ▪ Operators may be used ▪ Combining several parameters 	<p>STRS CILLIN</p> <p>STRS CILLIN /IT STRS /IT CILLIN STRS CILL # N STRS CILLIN OR CILLAN STRS SS 3 CILL # N /IT</p>
--	--

6.8 Displaying the number of results

<ul style="list-style-type: none"> ▪ In a single database environment, the number of results in a selected database are automatically displayed. To display the number of occurrences of search terms. ▪ In a cluster environment: The total number of results across all the databases in the cluster are displayed. <p>default : detailed results for each database in the cluster are displayed, together with the total number of results</p>	<p>POPAUDIT ON</p> <p>POP DET OFF</p> <p>POP DET ON</p>
---	--

7. MANIPULATING THE SEARCH STRATEGY

<ul style="list-style-type: none"> ▪ Display the fields for the current database with corresponding indexes and type of indexing (single word TEXT, phrase KW, date ODAT, numeric data ONUM, serial number CODE) ▪ Display the fields for a previously selected database. 	<p>FLD</p> <p>FLD FROM PLUSPAT</p>
<ul style="list-style-type: none"> ▪ Display the indexes for the current database ▪ Display an alphabetical list of terms within an index <ul style="list-style-type: none"> - Surrounding a specific term - Within a specific index ▪ If a search finds zero results, type NBR to check nearest terms in relevant index ▪ Display the indexes or search terms within an index for a previously selected database or from a database in a Cluster 	<p>NBR</p> <p>NBR COLOR NBR /INN JONES</p> <p>Term not in index /IN : XYZ **SS 1 : Results 0</p> <p>NBR /PAN IBM FROM PLUSPAT</p>
<ul style="list-style-type: none"> ▪ Display the search strategy <ul style="list-style-type: none"> - In full - For a specific search statement - For a range of search statements - Without displaying terms generated by truncation or contained in a "Super-term"(*MEM) - from a previously selected database - from all previously selected databases 	<p>HIS HIS 5 HIS 5-8 HIS SH or HIS SHORT</p> <p>HIS 3-5 FROM JAPIO HIS FROM BEGIN</p>
<ul style="list-style-type: none"> ▪ Deleting a search strategy <ul style="list-style-type: none"> - the last search statement - to remove a search statements after and including the specific SS number - several search statements (with all dependent search statements) - the complete search strategy in the current database - search statements with zero results - from a previously selected databases - from all databases 	<p>ER or BACKUP ER 3</p> <p>ER 3-6 8</p> <p>ER ALL or ERSLL</p> <p>ER SSZ ER 2 FROM USAPPS ER FROM BEGIN</p>
<ul style="list-style-type: none"> ▪ Keeping search statements <ul style="list-style-type: none"> - a specific search statement (with all dependent search statements) - several search statements (with all dependent search statements) - several search statements from a previously selected database 	<p>KEEP 3</p> <p>KEEP 3-7 9</p> <p>KEEP 2 5 9 FROM PLUSPAT</p>
<ul style="list-style-type: none"> ▪ Selecting documents with images: <ul style="list-style-type: none"> - from the last statement (default) - from a specific search statement 	<p>IM IM 5</p>

8. ONLINE DISPLAY

8.1 Single database and cluster environments

- **Single database environment:**
The display defaults of the current database.
- **Cluster environment:**
The display defaults to all databases in the order the files were listed in the cluster.
- It is possible to display search results from a previously selected database or from a specific database within a cluster by using the FROM parameter.

8.2 Accessing Images (in selected patent and trademark databases)

- **Choose "I" from the Welcome menu**
- **Add the IMG parameter when using the PRT command.**
- **Select "I" from the menu when using the BR and FO display commands**

<ul style="list-style-type: none"> ▪ Selecting documents containing images: <ul style="list-style-type: none"> - from the last search statement (default) - from a specific search statement 	IM IM5
--	-------------------------

8.3 Number of lines option: POP NL or OP NL command

The number of records displayed is determined by the number of lines option (POP NL default 24 lines) defined on your UserID and which service is selected from the Welcome menu.

- **Selecting Q from the Welcome menu**
 - If NL <= 100 : the default display will be the number of lines defined in the NL option. For a continuous display, specify a range of records and use the NONSTOP parameter.
 - If NL > 100 : the default display is the first record only. For a continuous display, specify a range of records.
- **Selecting I from the Welcome menu**
 - The default display is the first record only. For a continuous display, specify a range of records.

8.4 Online display commands

<ul style="list-style-type: none"> ▪ Displaying results ▪ System-defined display formats: <ul style="list-style-type: none"> SC or SCAN (AN, TI) TR (AN, TI, indexing) TEST (minimum) STDR (default) FULL or FU or MAX (complete record) (Note : SC, TR FULL available in patent and most sci-tech files) - default: first record in the last search statement in the STDR format - In a system-defined format - In a user-defined format (see FORmat) - with specific fields (tailored display) combining system-defined format and specific fields excluding specified fields from a system defined formats - the first record (most recent) - a specific record - several records 	PRT SCAN PRT TR PRT TEST PRT or PRT STDR PRT MAX PRT or SH PRT TEST PRT PATI PRT PA PN PR or PRT /PA /PN /PR PRT FULL PLUS XPN XPR PRT MAX MINUS IT PRT PRT 5 PRT 1-6 8

9.3 FULL Feature

Full-text & Full-Claims Display Feature

Add **EP**, **WO** and **US** fulltext or claims when displaying in files that do not contain those fields.

When searching biblio databases such as DWPI and PlusPat, enhance your displays with Fulltext and Claims data provided by the following fulltext files on Questel.Orbit:

- EPAPAT fulltext of European Applications from 1978 onwards
- PCTFULL fulltext of PCT applications from 1978 onwards (select fulltext coverage)
- USPAT fulltext of US patents from 1971 onwards

Full-Text Display Feature

FULLWO CLMS	Claims from PCTFULL	
FULLUS CLMS	Claims from USPAT	
FULLCLMS	Claims from EPAPAT, PCTFULL and USPAT	

9.4 PLUS Feature

When displaying records in a single file, the PLUS command allows you to add field(s) and format(s) from other files to each record displayed. The PLUS command initiates automatic cross-filing of the standardized patent numbers (XPN's) to the designated file(s); retrieval of the requested field(s) and integration of these field(s) below each corresponding document in a continuous display.

Overview of PLUS PRT command followed by : <ul style="list-style-type: none"> ▪ One format name, may be system defined or user defined, but may not be field label. ▪ Enter the record range, or SET PLUS one field label or one system or user defined format In parentheses One File Name, using standard Questel Orbit database name. 	PRT <FORMAT> <N-N or SET> PLUS <FIELD/FORMAT> (FILE NAME) PRT STDR 1-9 PLUS EC (PLUSPAT) PRT BIB SET PLUS CLMS (EPAPAT)
<ul style="list-style-type: none"> ▪ To display multiple fields 	PRT <FORMAT> <N-N or SET> PLUS <FIELD> (FILE NAME) <FIELD> (FILE NAME)
<ul style="list-style-type: none"> ▪ Using PLUS with images 	<ol style="list-style-type: none"> 1. PRT IMG<FORMAT><N-N or SET PLUS FIELD>(FILE NAME) 2. PRT IMG MAX SET PLUS STDR (EPAPAT)

9.5 Family Searching

Family searching can be done in the following patent databases : PLUSPAT, INPD, DWPI, DWPX, DPIN, DPINNS, WPAM AND WPAMNS

Family searching can be done with with a publication, application or priority number.

Questel Orbit has standardized these numbers so they may be searched easily within any of the above listed databases.

Syntax : FAM CCNNNNNNN/PN (publication number)
 FAM YYYYCC-NNNNNNN/AP (application number)
 FAM YYYYCC-NNNNNNN/PR (priority number)

CC – 2 Character Country Code

YYYY – 4 Digit Year

NNNNNNN – from 7 to 11 Digit Numbers **

(If the number is less than 7 digits back-fill with zeros to build a number that is 7 digits)

**US PGP 11 digits ; JP>2000 = 10 digits, DE, etc.

<ul style="list-style-type: none"> ▪ Searching in PlusPat : <ul style="list-style-type: none"> - with the publication number - with the application number - with the priority number 	<p>FAM EP---160/PN FAM 1997EP-0100811/AP FAM 1997DE-1020719/PR</p>
--	---

9.6 The FAMSTAT Print Command in the Inpadoc (INPD) & PlusPat Databases

Use the FAMSTAT print command after the patent family (FAM) command to automatically display patent family records from INPADOC (INPD) or PLUSPAT and their corresponding LGST (Legal Status) records.

<ul style="list-style-type: none"> ▪ Issue the FAMSTAT command immediately after the FAM command in INPD or PlusPat to display corresponding legal records from LGST. There are various ways in which records can be displayed. <ul style="list-style-type: none"> - INPD/ PLUSPAT Family records integrated with LGST records - INPD/PLUSPAT Family records integrated with LGST records (ENG only descriptions) - all INPD/PLUSPAT patent family records displayed first, followed by all LGST records - all INPD/PLUSPAT patent family records displayed first, followed by LGST records. (ENG only action descriptions) - The Inpadoc family, without Legal Status 	<p>FAMSTAT FAMSTATE or FAMSTAT MAXE FAMLIST FAMLISTE FAMINPD</p>
---	---

9.7 The MFAMSTAT Command in the PlusPat Database

<p>Issue the MFAMSTAT command immediately after the patent family command in the PlusPat database. Displays merged family data, abstract with legal status in one integrated record.</p> <ul style="list-style-type: none"> - The Pluspat Family, with LGST data - The PlusPat Family, with LGST data (English actions only) 	<p>MFAMSTAT MFAMSTATE or MFAMSTAT MAXE</p>
--	---

9.8 Merged Family Display Command in the PlusPat Database

The Merged Family Print Command allows integration of all individual family member records into one virtual family display. *NOTE : Limit is 1000 records.

<p>First use the FAM SS command on a results set to automatically retrieve all individual family members for that set.</p> <p>Use a Merged Format in the PRT Command :</p> <ul style="list-style-type: none"> - Family members and bibliographic data for full set of results - Family members and Class, Citation & abstract for the first 3 records 	<p>FAM SS 3</p> <p>PRT MINI SET</p> <p>PRT MMAX 1-3</p>
---	---

9.9 Creating a Database Cluster

<ul style="list-style-type: none"> • To create a user-defined database cluster with name PAT1 up to 40 databases per cluster up to 12 clusters per UserID • To obtain a list of databases which form a cluster • To select a cluster • To delete a user-defined cluster 	<p>CL PAT1 DWPI EPPATENT JAPIO</p> <p>CL PAT1 FI CL PATENTS [or] FI PATENTS (OMIT CL) CL ER PAT1</p>
---	---

9.10 Grouping and Deduping Results

Records from a set of cluster results can be arranged at the time of printing into patent groups. Patent groups are records from a set that are grouped together because they describe the same invention. Groups can contain duplicate or related records. Related records are those which contain and share the same priority data, but contain additional patent number information.

<p>Grouping Results Use the ID command to group records</p> <p>Reordering Files Use the ID command followed by the database names in preferred order to reorder files in the cluster if necessary</p> <p>Redisplaying Patent Grouping Statistics To redisplay the results of previous patent grouping command to see group count, number of duplicates and single records.</p>	<p>ID</p> <p>ID DWPI EPPATENT INPD WOPATENT</p> <p>ID STAT</p>
<p>Displaying Records</p> <ul style="list-style-type: none"> - Specific records with group numbers (x-y are records) - All records - Only the first record in each group - All records other than duplicates - Duplicate records only - Groups containing more than one record - Groups containing only one record 	<p>PRT PATGR 1-4</p> <p>PRT PATGR SET PRT PATGR FIRST PRT PATGR NODUP PRT PATGR DUPLI PRT PATGR MATCH PRT PATGR SINGLE</p>
<p>Displaying Groups</p> <ul style="list-style-type: none"> - Specific groups (x-y are groups) - All groups - First record in each group - All records except duplicates - Duplicate records only - Groups containing more than one record - Single record groups 	<p>PRT GR 1-3 PRT GR SET PRT GR SET FIRST PRT GR SET NODUP PRT GR SET DUP PRT GR SET MATCH PRT GR SET SINGLE</p>

9.11 MPUB

The MPUB command gathers all stages of publication of the same patent and integrates, into one merged record, the publication stages of each invention. Available in DEPAT.

<p>To create a merged record with the known publication, application or priority number :</p> <p>Publication Number : MPUB DENNNNNNN[N]/PN</p> <p>Application Number : MPUB YYYCC-NNNNNNN/AP</p> <p>Priority Number : MPUB YYYYYCC-NNNNNNN/PR</p> <p>Note : XPN, XAP and XPR fields may also be searchw with MPUB as long as the Questel•Orbit standardized fomate is used.</p> <p>To create a merged record based on a set of documents</p> <p>When searching with assignee or inventor names, keywords or classes, the results set (SS) may contain more than one record per invention. The MPUB command may be used with a set of results. Use the HIS command to determine the SS number.</p> <p>Note : There is a limit of 1000 results per SS</p> <p>To displs MPUB records :</p> <p>MPS displays the SDTR format plus the CT field.</p> <p>MPMX displays the MAX format mimus the IDT, BC and UP fields</p>	<p>MPUB DE4210167/PN</p> <p>MPUB 1994DE-4423677/AP</p> <p>MPUB 1998US-0111106/PR</p> <p>MPUB SS 1</p> <p>PRT MPS</p> <p>PRT MPMX</p>
--	--

9.12 CITF & CITB

CITF runs a forward citation search on a set of records. CITB runs a backward citation search on a set of records. The commands are available in the following files : EPPATENT, FRPATENT, WOPATENT, USPAT, DEPAT & PLUSPAT.

<p>The CITF command retrieves subsequent patents that are citing the patents in your initial set. The new result set contains both the original patents and the citing patents. The CITF command is used with a set of results. Use the HIS command to determine the SS number. Note : The maximum initial set size for the CITF command is 1000 results per SS.</p> <p>The CITB command retrieves the previously published patents cited by the patents in your initial set. The new set contains both the original patents and the cited patents.</p> <p>The CITB command is used with a set of results. Use the HIS command to determine the SS number. Note : The maximum initial set size for the CITB command is 1000 results per SS.</p>	<p>CITF SS 1</p> <p>CITB SS 1</p>
<p>When searching in Cluster mode, you may use these commands by entering the FROM parameter followed by the the name of one of the databases in the cluster.</p>	<p>CITF SS 1 FROM EPPATENT</p>

9.13 FAMCITE

The FAMCITE command is available in the PlusPat file, which has citations for US, EP, WO and FR patents

<ul style="list-style-type: none">▪ FAMCITE creates a citation report for a patent family. <p>After conducting a family search for a single patent family, you can display a complete citation report with the FAMCITE command. The report displays in three parts :</p> <ul style="list-style-type: none">- The original source family- The citing patent families (families with a patent citing a member of the source family)- The cited patent families (families with a patent cited by a member of the source family) <p>You can also display clipped images by adding the parameter IMG.</p>	<p>FAMCITE</p> <p>FAMCITE IMG</p>
---	---

10. OFFLINE PRINTING

10.1 Internet email delivery

<ul style="list-style-type: none">▪ To order email delivery: (all the options available with mailed offline prints can be used)<ul style="list-style-type: none">- Default: documents resulting from the last search statement in MAX format (limited to 500 documents per order) and in ASCII format- An Internet address must be stored on your ID before using the email print option▪ To order email sent to an alternate email address (different than the saved email address)<ul style="list-style-type: none">- prompted entry of address	<p>PR EMAIL XML TYPE XML PDF</p> <p>SET EMAIL</p> <p>PR EMAIL;SET JRECK@NESTLE-RSCH.CH</p>

18. TO END A QUESTEL ORBIT SESSION AND SWITCH TO MMS (TELNET CONNECTION ONLY)

18.1 Ending QO Session

<ul style="list-style-type: none"> ▪ with a temporary saved search ▪ without a saved search ▪ To end a Questel.Orbit session (PHARM database) and switch to MMS on MPHARM database (and only this database) with a saved search until the end of the day 	ST MDARC ST EN MDARC STRUC
--	---

18.2 Linking Questel.Orbit and MMS : the JOIN, and *MDARC commands

The JOIN command is used for transferring chemical compound numbers from selected bibliographic records in the DWPI and PHARM databases to the chemical structure files. The *MDARC Super-terms transfer numbers in the reverse direction. Graphical terminal emulation software is essential for displaying structures in the MARKUSH DARC systems

<ul style="list-style-type: none"> ▪ Default: all compound numbers in the last search statement containing results (maximum of 5,000 compound number, this maximum has been risen up to 50,000 especially for the MPHARM database). Specify the target structure database WPAM or MPHARM on MARKUSH DARC and create a name for the saved list of numbers. <ul style="list-style-type: none"> - restrict to specific compounds (PIM / MARKUSH DARC) - restrict to generic compounds (PIM / MARKUSH DARC) - one of several roles (MPHARM/MARKUSH DARC) 	JOIN JOIN TO WPAM VIA LIST3 SPE JOIN TO WPAM VIA LIST4 GEN JOIN TO MPHARM VIA LIST5- ROLE N,T
<ul style="list-style-type: none"> ▪ Chemical compounds are retrieved in graphical form by a structure search with the Generic compound numbers can be saved and transferred to Questel.Orbit for retrieval of corresponding bibliographic records. Search for: <ul style="list-style-type: none"> - compound numbers in CAS file - compound numbers in DWPI file - compound numbers in PHARM file 	*MDARC NAME1 *MDARC name2.C.R *MDARC name3.DR/CN

19. RESERVED TERMS

<p>Questel.Orbit commands are reserved terms, i.e. they are reserved for search syntax. Some examples are : IMAGE, ID, PRINT and FILE.</p> <p>There are three ways around reserved status :</p> <ol style="list-style-type: none">1. Truncation2. Word Order - place reserved term second3 . Quotes - to retrieve exact Reserved Term as search term, enclose in double quotes " " .	<p>IMAGE ? OR WATERMARK WATERMARK OR IMAGE "IMAGE" OR WATERMARK</p>
<p>System or Proximity operators are also reserved terms:</p> <ul style="list-style-type: none">- to search for : sulfur transfer agent L-S-D- to search for : S F D Labs	<p>W, D, F, S, P, and L</p> <p>"L" W "S" W "D"</p> <p>/PA "S" W "F" W "D" LABS</p>

20. STOPWORDS

<p>There are stopwords in a small number of files on Questel.Orbit. The files are: DWPI, IFIPAT, PHARM and CAS</p> <p>The Stopwords are all associated with Chemical Symbols and relate to the case of the first letter of the word in the record.</p> <p>The following are treated as Stopwords - <i>only if they begin with a lower case letter</i></p> <p>To search in vitro, for all stopword-free files, use double quotes around word "in" -</p> <p>For DWPI, IFIPAT, PHARM and CAS, drop the word "in" from search request.</p>	<p>a, at, a, be, he, in, and no</p> <p>"IN" W VITRO</p> <p>VITRO W FERTILI+</p>
---	--

21. SYSTEM LIMITS

Number of **search statements** per database: **200**

Number of **characters** per search statement: **2,030**

Number of **results / answers** per search set: **variable**: This depends on the dynamic allocation of system resources.

Number of **terms** per **memory list** (**crossfile searching & statistical analysis**): **100,000**

Number of **terms** per answer set using truncation: **30,000**

Number of **types of truncation** within a search term: **3**

Number of **terms, portions** or **identical truncation** symbols: **7**

Number of default Memory Lists (**MEM1, MEM2, MEM3, MEM4**): **4**

MEM1 is a default crossfile searching list

MEM2 default statistical analysis list

150 user-named lists (syntax: MEM <name> /<field >)

Patent Grouping & ID command may be used on a maximum of **5000** documents.

Sorting : the SORT command may be used on a maximum of **5000** documents.

Ranking: The RK command maybe used on a maximum of **5000** documents.

Family Searches on a Search Set: the FAM SS command may be used on maximum of **1000** records.

Number of **words** that may be used with **proximity connectors w** and **d**: **9**

e.g.: transgenic **9d** animal? [transgenic **10d** animal? will not process correctly]

Offline Prints: Maximum number of documents: **5000 by postal mail, 500 by email**
