Electrical Safety Management
16 hour course

Course Introduction

Electrical safety in organisations is often the responsibility of non-electrically qualified staff, such as facilities managers, risk managers or health & safety officers who have not had systematic training in how to prevent electrical hazards in the workplace. This situation results in several deaths in the workplace being caused by electrical incidents.

This course provides a comprehensive overview of the fundamentals of electrical safety and a systematic set of principles for assessing and managing electrical safety in any business and across all sectors of industry and the public sector: the subject is universally applicable, across industries and countries. The course is applicable to the buildings, facilities, equipment and environments associated with a wide range of organisations, irrespective of size, which includes the industrial, commercial and public sectors.

The course provides practical guidance to enable individuals and their organisations to have a level of knowledge and understanding to manage the risks associated with an electrical system. It will focus on providing a specific procedure for managing electrical safety.

Key learning outcomes

- Understand practical guidance in the form of a self-assessment to follow a systematic approach to understand the management of various aspects of an electrical system for your organisation
- Be able to create and implement an effective electrical safety management system where nothing is currently in place or to enhance an existing system
- Consider policy, procedure and people aspects of the electrical system
- Learn how to audit your building's risk
- Gain confidence in your own expertise to actively reduce the risk of workplace accidents
- Acquire expertise in the application of the Code of Practice for Electrical Safety Management and its self-assessment tool

Key features

- Save money on expensive consultancy fees by identifying weaknesses yourself
- This course is structured around the CoP but will give more detail of how to interpret it for learners who want to make sure they get it right in the workplace but don’t want to pay a consultant to guide them through it
- Applicable to those who may not be from a traditional electrical engineering background or experienced in managing electrical systems but is still very relevant for the practising CEng who may use it for CPD, for example

Course content may be subject to change or updates. Please contact the IET for the latest course content.
Expert multidisciplinary e-courses for engineers at all career stages

Core Units
- Unit 1: Introduction
- Unit 2: Basic electricity matters
- Unit 3: Electrical incidents
- Unit 4: Electrical safety management
- Unit 5: Electrical design policy and leadership
- Unit 6: Risk assessment, working practices, working precautions
- Unit 7: Procedures
- Unit 8: Operation and maintenance
- Unit 9: Incident investigation, documentation, performance measures
- Unit 10: Appointments, roles and responsibilities, training, competence, contractors
- Unit 11: Co-operation, communication, audits
- Unit 12: Live working
- Unit 13: Operating machinery
- Unit 14: Hazardous atmospheres
- Unit 15: Cables, overhead lines, HV network operation
- Unit 16: Next steps

What makes the IET Academy online courses different?

A new training resource from the IET, the Academy provides flexible e-learning using the latest techniques to enhance engagement and recall.

Each individual unit is fully interactive, with tasks to compete along the way to help embed your learning. Hosted on the renowned Cross Knowledge platform, the Academy uses proven, effective learning techniques.

Cost effective and flexible

For many engineers staying informed or changing technology to remain current in their role is paramount, however, finding the time and budget to attend external training is challenging. The IET Academy’s flexible learning platform allows access to training ‘anytime, anywhere’ or the course content can be quickly and easily integrated into an existing learning management system.

Target audience
- Those who manage the safety of an electrical system
- Those responsible for ensuring there is an appropriate electrical safety policy and associated procedures
- Those responsible for ensuring that the procedures are implemented
- Those responsible for the management of specific electrical tasks
- Those responsible for the safe condition of equipment and machinery
- Those that need or wish to improve their knowledge of the types of activities that need to be followed to manage electrical safety
- Those who have purchased the Code of Practice for Electrical Safety Management

Other related courses
- Electrical Building Services
- Risk Management for Engineers
- In-services Inspection and Testing of Electrical Equipment (coming soon)

How to purchase
- To buy a single course or set of units for your personal learning go to the Academy online store www.theiet.org/academy
- For multi-user licences for your company email academy@theiet.org

We offer free trials and demonstrations for customers interested in a company-wide training solution.
