Engineering Technicians apply proven techniques and procedures to the solution of practical engineering problems.

Engineering Technicians are required to apply safe systems of work and are able to demonstrate:

– Evidence of their contribution to either the design, development, manufacture, commissioning, decommissioning, operation or maintenance of products, equipment, processes or services
– Supervisory or technical responsibility
– Effective interpersonal skills in communicating technical matters
– Commitment to professional engineering values.

The Competence and Commitment Standard for Engineering Technicians.

Engineering Technicians must be competent throughout their working life, by virtue of their education, training and experience, to:

The examples given below are intended to help you identify activities you might quote to demonstrate the required competence and commitment for EngTech registration. These are not exhaustive. Moreover, you are not required to give multiple examples to demonstrate competence and commitment.

Tell us about your career, education and training. Explain how the experience you have gained has made you more competent.

A Use engineering knowledge and understanding to apply technical and practical skills.

This includes the ability to:

The reviewers will be looking for evidence that you have the know-how to do the job, and were able to go beyond the immediate requirements and use your initiative and experience to solve a problem or improve a process.

A1 Review and select appropriate techniques, procedures and methods to undertake tasks.

Describe:

– an example of work you did that went well, the choices you made and the outcome
– or something in your work that you were involved in which didn’t quite work and explain why
– or a technique, procedure or method you improved upon and explain why.
### A2  Use appropriate scientific, technical or engineering principles.

- Drawing from your direct experience, this might be an explanation of how a piece of equipment, system or mechanism works.

### B  Contribute to the design, development, manufacture, construction, commissioning, operation or maintenance of products, equipment, processes, systems or services.

- Explain how you contribute to one or more of these activities.

### B1  Identify problems and apply appropriate methods to identify causes and achieve satisfactory solutions.

- Show an example of how you have used measurement, monitoring and assessment to:
  - identify the source of a problem
  - or to identify an opportunity
  - or to propose a solution.

### B2  Identify, organise and use resources effectively to complete tasks, with consideration for cost, quality, safety, security and environmental impact.

- Illustrate how you make decisions about:
  - what information, material, component, people or plant to use
  - or how to introduce a new method of working
  - or what precautions you took.

- Describe how you have contributed to best practice methods of continuous improvement, eg ISO 9000.

### C  Accept and exercise personal responsibility.

- Describe an experience or instance where you have had to accept personal responsibility for seeing a process through to completion within agreed targets.

### C1  Work reliably and effectively without close supervision, to the appropriate codes of practice.

- Your evidence should show how you identified and agreed what had to be done and to what standards on a typical project.

### C2  Accept responsibility for work of self or others.

- Your evidence could include:
  - minutes of meetings; site notes and instructions;
  - Variation Orders; programmes of work; specifications, drawing and reports; or appraisals. Activity not associated with your job can contribute evidence.

### C3  Accept, allocate and supervise technical and other tasks.
### D Use effective communication and interpersonal skills.

This includes the ability to:

- **D1** Use oral, written and electronic methods for the communication in English\(^1\) of technical and other information.

  Your evidence could include: letters; reports; drawings; emails; minutes, including of progress meetings; appraisals; work instructions; and other task planning and organising documents. Your application itself will be relevant.

- **D2** Work effectively with colleagues, clients, suppliers or the public, and be aware of the needs and concerns of others, especially where related to diversity and equality.

  Show examples of how this has occurred, and your role at the time. Describe your role as part of a team. Describe a situation where you put your awareness into practice.

### E Make a personal commitment to an appropriate code of professional conduct, recognising obligations to society, the profession and the environment.

Your commitment will be to become part of the profession and uphold the standards to which all members subscribe.

You need to show that you have read and understood your institution’s Code of Conduct.

### E1 Comply with the Code of Conduct of your institution.

The professional review involves demonstration of, or discussion of, your position on typical ethical challenges.

### E2 Manage and apply safe systems of work.

Provide evidence of applying current safety requirements, such as risk assessment and other examples of good practice you adopt in your work. You will need to show that you have received a formal safety instruction relating to your workplace (such as a CSCS safety test in the UK), or an update on statutory regulations. In the UK an example would be COSHH requirements.

\(^1\)Any interviews will be conducted in English, subject only to the provisions of the Welsh Language Act 1993 and any Regulations which may be made in implementation of European Union directives on free movement of labour.
