

The Incorporated Engineer Standard (IEng)

Incorporated Engineers maintain and manage applications of current and developing technology, and may undertake engineering design, development, manufacture, construction and operation. Incorporated Engineers are able to demonstrate:

- The theoretical knowledge to solve problems in developed technologies using well proven analytical techniques
- Successful application of their knowledge to deliver engineering projects or services using established technologies and methods
- Contribution to the financial and planning aspects of projects or tasks and contribution to leading and developing other professional staff
- Effective interpersonal skills in communicating technical matters
- Commitment to professional engineering values
- The ability to specify and operate to safe systems of work and to demonstrate appropriate consideration of the principles of sustainability

The Incorporated Engineer (IEng) Standard

Incorporated Engineers maintain and manage applications of current and developing technology, and may undertake engineering design, development, manufacture, construction and operation.

Incorporated Engineers shall demonstrate:

The examples of evidence are intended as guidance to help identify activities that might demonstrate the required competence and commitment for Incorporated Engineer registration. There is no requirement to provide multiple examples of evidence for each area of competence, but examples from two or three projects or tasks would be beneficial.

A Knowledge and understanding.

Incorporated Engineers shall use a combination of general and specialist engineering knowledge and understanding to apply existing and emerging technology.

Examples of evidence:

A1 Maintain and extend a sound theoretical approach to the application of technology in engineering practice.

- Identifying the limits of your knowledge and skills
- Taking steps to develop and extend personal knowledge of appropriate technology, both current and emerging
- Applying newly gained knowledge successfully in a task or project
- Reviewing current procedures and processes and recommended improvements or changes to reflect best practice
- Developing knowledge needed to work in a new industry area or discipline

A2 Use a sound evidence-based approach to problem-solving and contribute to continuous improvement.

- Applying knowledge and experience to investigate and solve problems arising during engineering tasks and implementing corrective action
- Identifying opportunities for improvements and how these have been (or could be) implemented
- Using an established process to analyse issues and establish priorities

B Design, development and solving engineering problems

Incorporated Engineers shall apply appropriate theoretical and practical methods to design, develop, manufacture, construct, commission, operate, maintain, decommission and recycle engineering processes, systems, services and products.

Examples of evidence:

B1 Identify, review and select techniques, procedures and methods to undertake engineering tasks.

- Establishing the engineering steps needed to carry out a task efficiently
- Identifying the available products or processes needed to undertake an engineering task and establishing a means of identifying the most suitable solution
- Preparing technical specifications
- Reviewing and comparing responses to the technical aspects of tender invitations
- Establishing user requirements for improvements

B2 Contribute to the design and development of engineering solutions.

- Contributing to the identification and specification of design and development requirements for engineering products, processes, systems and services
- Identifying operational risks and evaluating possible engineering solutions, taking account of cost, quality, safety, reliability, accessibility, appearance, fitness for purpose, security (including cyber security), intellectual property constraints and opportunities, and environmental impact
- Collecting and analysing results
- Carrying out necessary tests

B3 Implement design solutions for equipment or processes and contribute to their evaluation.	– Identifying the resources required for implementation – Implementing design solutions, taking account of critical constraints, including due concern for safety and sustainability – Identifying problems during implementation and taking corrective action – Contributing to recommendations for improvement and actively learning from feedback on results
C Responsibility, management and leadership. Incorporated Engineers shall provide technical and commercial management.	Examples of evidence:
C1 Plan the work and resources needed to enable effective implementation of engineering tasks and projects.	– Identifying factors affecting the project implementation – Carrying out holistic and systematic risk identification, assessment and management – Preparing and agreeing implementation plans and method statements – Securing the necessary resources and confirming roles in a project team – Applying the necessary contractual arrangements with other stakeholders (clients, subcontractors, suppliers, etc)
C2 Manage (organise, direct and control), programme or schedule, budget and resource elements of engineering tasks or projects.	– Operating appropriate management systems – Working to the agreed quality standards, programme and budget, within legal and statutory requirements – Managing work teams, coordinating project activities – Identifying variations from quality standards, programme and budgets, and taking corrective action – Evaluating performance and recommending improvements

C3 Manage teams, or the input of others, into own work and assist others to meet changing technical and management needs.	– Agreeing objectives and work plans with teams and individuals – Reinforcing team commitment to professional standards – Leading and supporting team and individual development – Assessing team and individual performance, and providing feedback – Seeking input from other teams or specialists where needed and managing the relationship
C4 Take an active role in continuous quality improvement.	– Ensuring the application of quality management principles by team members and colleagues – Managing operations to maintain quality standards eg ISO 9000, EQFM – Evaluating projects and making recommendations for improvement – Implementing and sharing the results of lessons learned
D Communication and interpersonal skills. Incorporated Engineers shall demonstrate effective communication and interpersonal skills.	Examples of evidence:
D1 Communicate effectively with others, at all levels, in English.	– Contributing to, chairing and recording meetings and discussions – Preparing communications, documents and reports on technical matters – Exchanging information and providing advice to technical and non-technical colleagues – Engaging or interacting with professional networks
D2 Clearly present and discuss proposals, justifications and conclusions.	– Preparing and delivering appropriate presentations – Managing debates with audiences – Feeding the results back to improve the proposals – Contributing to the awareness of risk

D3 Demonstrate personal and social skills and awareness of diversity and inclusion issues.

- Knowing and managing own emotions, strengths and weaknesses
- Being confident and flexible in dealing with new and changing interpersonal situations
- Identifying, agreeing and working towards collective goals
- Creating, maintaining and enhancing productive working relationships, and resolving conflicts
- Being supportive of the needs and concerns of others, especially where this relates to diversity and inclusion

E Personal and professional commitment.

Incorporated Engineers shall demonstrate a personal commitment to professional standards, recognising obligations to society, the profession and the environment.

Examples of evidence:

E1 Understand and comply with relevant codes of conduct.

- Demonstrating compliance with your Licensee's Code of Professional Conduct
- Identifying aspects of the Code particularly relevant to your role
- Managing work within all relevant legislative and regulatory frameworks, including social and employment legislation

E2 Understand the safety implications of their role and manage, apply and improve safe systems of work.

- Identifying and taking responsibility for your own obligations for health, safety and welfare issues
- Managing systems that satisfy health, safety and welfare requirements
- Developing and implementing appropriate hazard identification and risk management systems and culture
- Managing, evaluating and improving these systems
- Applying a sound knowledge of health and safety legislation, for example: HASAW 1974, CDM regulations, ISO 45001 and company safety policies

E3 Understand the principles of sustainable development and apply them in their work.	– Operating and acting responsibly, taking account of the need to progress environmental, social and economic outcomes simultaneously – Recognising how sustainability principles, can be applied in your day-to-day work as described in the Guidance on Sustainability on page 48 – Providing products and services which maintain and enhance the quality of the environment and community, and meet financial objectives – Understanding and encouraging stakeholder involvement in sustainable development – Using resources efficiently and effectively – Taking action to minimise environmental impact in your area of responsibility
E4 Carry out and record the Continuing Professional Development (CPD) necessary to maintain and enhance competence in their own area of practice.	– Undertaking reviews of your own development needs – Planning how to meet personal and organisational objectives – Carrying out and recording planned and unplanned CPD activities – Maintaining evidence of competence development – Evaluating CPD outcomes against any plans made – Assisting others with their own CPD
E5 Understand the ethical issues that may arise in their role and carry out their responsibilities in an ethical manner.	– Understanding the ethical issues that you may encounter in your role – Giving an example of where you have applied ethical principles as described in the Statement of Ethical principles on page 47 – Giving an example of where you have applied or upheld ethical principles as defined by your organisation or company
