Contents

1 Introduction **1**
Yoshifumi Nishio
References 3

2 Analysis of bifurcations in oscillatory circuits **5**
Hiroyuki Asahara, Takuji Kousaka and Tetsushi Ueta
2.1 Introduction 5
2.2 Analysis of bifurcations of autonomous systems 7
2.2.1 Stability of equilibrium point 7
2.2.2 Bifurcation at equilibrium point 8
2.2.3 Stability of fixed point 10
2.2.4 Bifurcation of fixed point 14
2.3 Example of bifurcation analysis applied to an autonomous system 15
2.3.1 Single BVP oscillator 16
2.3.2 Coupled BVP oscillators 18
2.4 Conclusions 21
Acknowledgments 23
References 23

3 Fractional-order oscillators **25**
Ahmed G. Radwan, Brent J. Maundy and Ahmed S. Elwakil
3.1 Fractional-order sinusoidal oscillators 25
3.1.1 Fractional-order linear time invariant systems (FLTI) 26
3.1.2 Stability analysis 26
3.1.3 Stability analysis examples 27
3.1.4 General theorems of fractional-order LTI systems 30
3.2 Fractional-order relaxation oscillators 36
3.2.1 The fractional multivibrator 36
3.2.2 Verification via simulation and experimentation 39
3.2.3 Multivibrator with biological tissues 42
3.3 Conclusion 47
References 47

4 Memristive and memcapacitive astable multivibrators **51**
Dongsheng Yu, Herbert Ho-Ching Iu, Tyrone Fernando and Jason Eshraghian
4.1 Introduction 51
4.2 Circuit schematic of floating memristor emulator 54

4.3 Theoretical analysis of memristive astable multivibrator 56
4.3.1 Discharging interval 57
4.3.2 Charging interval 58
4.4 Simulation validation for memristive astable multivibrator 59
4.4.1 Testing the memristor emulator 59
4.4.2 Observing the oscillation of memristive astable multivibrator 60
4.5 Memcapacitor-based astable oscillator circuit 63
4.6 Simulation validation for memcapacitive astable multivibrator 65
4.7 Conclusion 68
References 68

5 Piecewise-constant oscillators and their applications 73
Tadashi Tsubone, Keisuke Suzuki and Takahiro Aoki
5.1 Basic concept of piecewise-constant oscillations 73
5.2 Example 1: a piecewise-constant chaotic spiking oscillator 78
5.2.1 Circuit and dynamics 79
5.2.2 Embedded return map 80
5.3 Example 2: coupled systems of piecewise-constant oscillators 82
5.3.1 A piecewise-constant oscillator exhibiting limit cycle 82
5.3.2 Coupled system of piecewise-constant oscillators 85
5.3.3 Analysis of PWC oscillators 88
5.4 Conclusions 90
References 91

6 Master–slave synchronization of hysteresis neural-type oscillators 93
Kenya Jin'no, Takuya Kurihara and Toshimichi Saito
6.1 Introduction 93
6.2 Relaxation oscillator with a time-variant threshold 94
6.2.1 Periodic fluctuation threshold 94
6.2.2 Period adjustment capability 96
6.3 The response to non-periodic external force 97
6.3.1 Without external force 99
6.3.2 Periodic external force 101
6.3.3 Uniform random period external force 104
6.4 Conclusions 107
References 107

7 Multimode oscillations in coupled hard oscillators 109
Kuniyasu Shimizu and Tetsuro Endo
7.1 Introduction 109
7.2 Two inductor-coupled hard oscillators 111
7.2.1 Weakly nonlinear oscillators 111
7.2.2 Strongly nonlinear oscillators 121
7.3 Propagating waves in a coupled hard-oscillator ring 126
7.4 Conclusions 130
References 131

8 Wave propagation of phase difference in coupled oscillator arrays **133**
Masayuki Yamauchi, Yoshihito Todani and Syohei Fujimoto
8.1 Introduction 133
8.2 Circuit model 134
8.3 Phase-inversion waves 138
8.3.1 Basic synchronization phenomena 138
8.3.2 Sample of phase-inversion waves 139
8.3.3 Characteristics of the phase-inversion waves 145
8.3.4 Propagation velocity of phase-inversion waves 146
8.3.5 Mechanisms 146
8.4 Conclusion 161
Acknowledgment 161
References 161

9 Coupled oscillator networks with frustration **163**
Yoko Uwate and Yoshifumi Nishio
9.1 Introduction 163
9.2 Frustration in ring van der Pol oscillators with different frequencies 165
9.2.1 Circuit model 165
9.2.2 Synchronization phenomena 166
9.3 Frustration in coupled polygonal oscillatory networks 169
9.3.1 Weakly coupled oscillators 169
9.3.2 Strongly coupled oscillators 176
9.4 Conclusions 179
References 180

10 Graph comparison and synchronization in complex networks **183**
Hui Liu, Ming Cao and Chai Wah Wu
10.1 Introduction 183
10.2 Network model and preliminaries 185
10.3 Tools of graph comparison 187
10.4 Synchronization in an undirected network 188
10.4.1 Graph comparison with the complete graph 188
10.4.2 Graph comparison with the star graph 190
10.4.3 Illustrative examples 192
10.5 Synchronization in a directed network 196
10.5.1 Graph comparison with the complete graph 196
10.5.2 Illustrative examples 200
10.6 Conclusions 203
Acknowledgments 203
Appendix A: Comments on Assumption 10.1 203
Appendix B: Numerical simulation 205
References 206

11 Experimental studies on reconfigurable networks of chaotic oscillators **209**
Massimiliano de Magistris, Carlo Petrarca and Soudeh Yaghouti
11.1 Introduction 209
11.2 Realization of a network of nonlinear oscillators with linear coupling 210
11.2.1 Designing a reconfigurable complex network of nonlinear oscillators 211
11.2.2 Chua's circuits as system nodes 213
11.2.3 A reconfigurable linear N-pole as interconnection network 213
11.2.4 The actual system implementation 215
11.3 Collective behaviours and relative analysis tools 217
11.3.1 Synchronization 217
11.3.2 Clustering 220
11.4 Experimental results and validation of theoretical predictions 220
11.4.1 Experiments on synchronization with diffusive links 221
11.4.2 Experiments on synchronization with dynamic links 223
11.4.3 Experiments on clustering 225
11.4.4 Observation of patterns and waves 231
11.5 Concluding remarks 236
References 241

12 Fundamental operation and design of high-frequency high-efficiency tuned power oscillator **245**
Hiroo Sekiya
12.1 Introduction 245
12.2 Power amplifiers 247
12.2.1 Class-D amplifier 247
12.2.2 Class-E amplifier 250
12.2.3 Driver circuit 251
12.3 Tuned power oscillator 252
12.3.1 Free-running class-E oscillator 252
12.3.2 Injection-locked class-E oscillator 254
12.3.3 Class-E_M oscillator with second harmonic injection 255
12.4 Design of free-running class-E oscillator 256
12.4.1 Design strategies 256
12.4.2 Numerical design procedure 257
12.4.3 Design examples and experimental measurements 260
12.5 Conclusion 263
References 264

13 Ring oscillators and self-timed rings in true random number generators **267**
Viktor Fischer, Patrick Haddad and Abdelkarim Cherkaoui
13.1 Introduction 267
13.2 Design of TRNGs 268
13.3 Electric noise and clock jitter as a source of randomness 269
13.3.1 Electric noise in clock generators 269
13.3.2 Jitter of the generated clock signal 270
13.4 Harvesting the entropy from jittery clock signals 275
13.5 Single-event ring oscillators as sources of jittery clocks 276
13.5.1 Modelling the jitter of clocks generated in ring oscillators 278
13.6 Multi-event ring oscillators with signal collisions 279
13.6.1 Modelling number of oscillations in TERO 280
13.7 STR oscillators 281
13.7.1 Clock jitter in STRs 284
13.8 Examples of oscillator-based TRNGs 285
13.8.1 Elementary ring oscillator-based TRNG 285
13.8.2 Multiple ring oscillator-based TRNG 286
13.8.3 TERO-based TRNG 287
13.8.4 STR-based TRNG 288
13.9 Conclusions 290
References 290

14 Attacking on-chip oscillators in cryptographic applications **293**
Lilian Bossuet, Pierre Bayon and Viktor Fischer
14.1 Introduction 293
14.2 Background 294
14.2.1 TRNG model and implementation 294
14.3 Figures 295
14.3.1 Attack scenario 296
14.4 Retrieving information on the RO-TRNG: passive electromagnetic attack 297
14.4.1 Electromagnetic analysis platform 297
14.4.2 Frequency analysis 298
14.4.3 Differential frequency analysis 299
14.4.4 Experiments 300
14.4.5 Experimental results 301
14.5 Modifying the RO-TRNG behavior: active electromagnetic attack 304
14.5.1 Injection platform 304
14.5.2 Experiments 306
14.5.3 Attack description 307

14.5.4 Effect of the electromagnetic waves on the ROs—Target #1 308
14.5.5 Effect of the electromagnetic waves on the TRNG—Target #2 311
14.5.6 Discussion 314
14.6 Conclusion 315
References 315
